

陕西机械式导针线嘴调试

发布日期：2025-09-28 | 阅读量：17

电机线嘴以超硬合金或热处理碳钢为材料，有良好的低摩擦系数及抗弯强度、耐磨性，特殊的形状，***用与串激、风扇、微电机、马达等行业的定子、转子的线圈绕制。◎产品优点：超硬合金线嘴内孔及圆弧部分经过12道工序道精细研磨，光洁度达到镜面，80倍放大镜下检测无划痕，保证使用的安全性

The nozzle of the motor is made of superhard alloy or heat-treated carbon steel. It has good low friction coefficient, bending strength, wear resistance and special shape. It is widely used for winding the stator and rotor coils of industries such as series excitation, fans, micromotors and motors. ◎ product advantages: the inner hole and circular arc part of the superhard alloy wire nozzle are subject to 12 processes of fine grinding, and the finish reaches the mirror surface. There is no scratch when tested under an 80 times magnifying glass, which ensures the safety of use 千和精密机械有限公司线嘴。陕西机械式导针线嘴调试

本公司生产的马达线嘴**于全国各地区，不管是自主产品还是代理产品都已经达到国家同种产品中的质量产品，深受中小企业的信赖与支持，千和精密机械凭借多年来对马达线嘴的生产经销经验，在同行业中遥遥**。

The motor nozzles produced by the company are sold well in all regions of the country. Both independent products and agent products have reached the high-quality products of the same kind of products in the country, and are deeply trusted and supported by small and medium-sized enterprises. With many years of experience in the production and distribution of motor nozzles, Qianhe precision machinery is far ahead in the same industry. 江苏常见导针线嘴商家千和精密机械有限公司出售线嘴。

合金线嘴是***用于绕线机上的一个重要配件,在优劣混杂的众多供应商里要挑选出***的合金线嘴,就离不开关键的几点：（1）线嘴出线口和入线口的表面光洁（2）内孔的光洁度（3）内径的尺寸精度（4）安装尺寸的精度（5）线嘴出线口和入线口的R形状。

Alloy nozzle is an important accessory widely used in winding machines. In order to select high-quality alloy nozzle from a large number of suppliers with mixed advantages and disadvantages, the following key points are indispensable: (1) surface finish of nozzle outlet and inlet (2) finish of inner hole (3) dimensional accuracy of inner diameter (4) accuracy of installation dimension (5) R shape of nozzle outlet and inlet.

导针注意事项：3. 内孔的尺寸精度:精密加工制造的线嘴，它的内孔精度可以控制在0.01mm
以内，如果内孔尺寸**小小，对使用者来说是一个灾难，就够你忙的了，断线的现象就会经常发
生，甚至所绕制线圈绝缘不良或匝间短路也就不难解释缘故了□Precautions for guide pin: 3.
Dimensional accuracy of inner hole: for the nozzle made by precision machining, its inner
hole accuracy can be controlled within 0.01mm. If the inner hole size is large or small, it will
be a disaster to the user, which will be enough for you to be busy. Wire breakage will often
occur, and it is not difficult to explain why the winding coil has poor insulation or inter turn
